

Airbus Group

Streamlining processes
with Aceni and Epay.

Airbus is a global leader in aerospace, defence and related services. The group includes Airbus Commercial as the leading manufacturer of passenger aircraft, with Airbus Military covering tanker, transport and mission aircraft, Airbus Helicopters as the world's largest helicopter supplier and Airbus Defence & Space, the European leader in space programmes from Ariane to Galileo.

The Challenge

Part of the team's remit at Airbus was to bring together the processing and distribution of numerous payrolls. This wasn't easy. Each business unit operated a different payroll system, running payslips at varying times of the month, with differing volumes, formats and methods of distribution.

It was initially decided that payroll processing for five of the businesses would move to SAP with the rest to follow. Pay dates would also be adjusted at the same time to balance the monthly workload.

The next challenge was to find an efficient distribution method that accepted multiple payroll data files for each of the group's business units. The solution also needed to be able to design and distribute different payslip formats as well as offering the option of print or online versions for different employees. Above all, this all needed to be provided as a cost effective solution.

Datagraphic's Aceni and Epay services both met the challenge.

"Datagraphic were extremely professional and supported us with advice and guidance throughout the process."

Group HR Operations

Results Achieved

- Different payslip designs for each of the group's businesses, from one service
- Distribution costs reduced by using Royal Mail services for volume mailings
- Epayslips and printed payslips available from the same payroll file

Why Datagraphic?

We partner with organisations to provide a secure end-to-end document automation service that is simple, liberating and integrated.

Whether you're communicating with customers, suppliers, employees or all three, our friendly and dedicated team will help you deliver accurate, efficient and future-proofed communications without buying expensive software or costly equipment.
